

Delivering the Enterprise-Ready Cloud

Presented by:
Treb Ryan, CEO, OpSource
August 19, 2009

OpSource™

Moderating: Richard Dym, CMO, OpSource

■ Welcome!

- All phones are set on mute
- If you have a question, please use the Chat Q&A box located below the presentation panel
- We will collect questions throughout the webinar and answer as many as we can at the end
- If we don't answer your question, we'll follow-up with an answer via email
- Full-screen button will let you toggle between a larger image view and the view with Q&A box to type in questions – you can use it throughout the webinar

OpSource™

Treb Ryan, CEO, OpSource

- Since 1996, Treb has been instrumental in defining and creating services organizations that improve the quality and reliability of the technology infrastructures businesses depend on for communications and commerce
- Co-founded OpSource in 2002
- Prior to OpSource, held positions of President of the Americas for Metromedia Fiber Network (MFN), co-founder & CEO of SiteSmith, and Vice President of Professional Services for GlobalCenter
- Frequent guest speaker at industry events, including CIO, venture capital, Internet, hosting, and software conferences
- Recognized thought leader in SaaS and Cloud space

Where does Cloud come from?

OpSource™

Generation Cloud Expectations

Immediate
Availability

Sharing &
Collaboration

Ubiquitous
Access

OpSource™

Enterprise Storm Coming

Resources

Immediate Availability

=

Complete Flexibility

Immediate

- Automated Sign-Up
- Quick Provisioning

Incremental

- Small Amounts
- Don't pay if not used

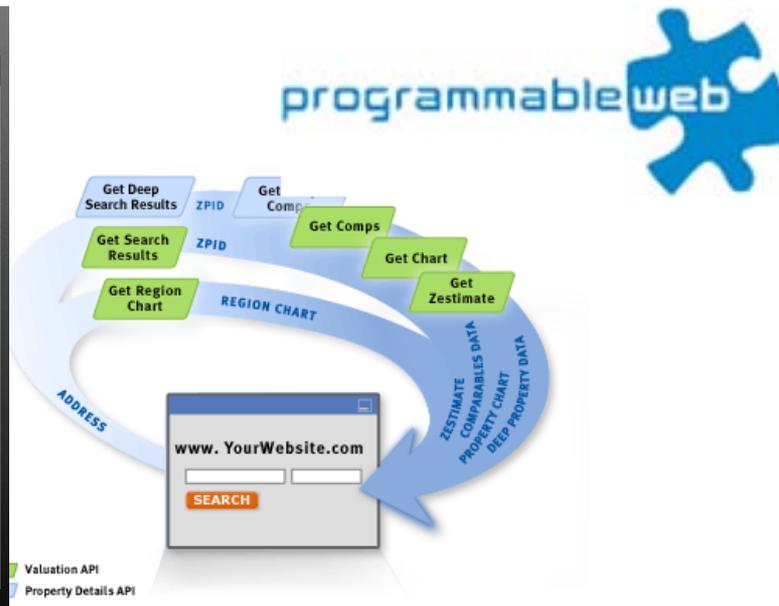

Flexible

- No Commits
- Turn off is as easy as turn on

Ubiquitous Access

=

Web + Programmability

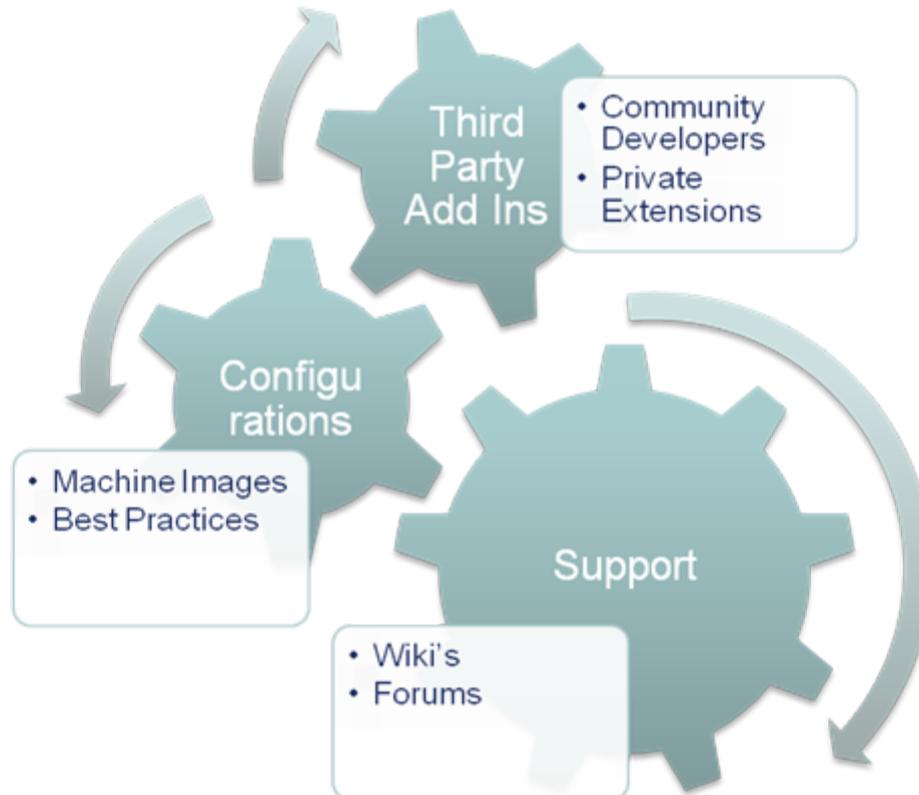

**Sharing &
Collaboration** = **Community
Resources**

**Successful
Communities**

=

**Successful
Clouds**

OpSource™

So What do We Need for Enterprise Cloud

Security &
Compliance

Standards

Support

Management
& Control

Performance

Private Cloud

Enterprise Cloud

- Private Clouds are Virtual Environments Built on in-house infrastructure
 - No Immediacy – big cap ex deployments
 - No Ubiquity – usually no API
 - No Community – can't reach outside enterprise
- Enterprise Clouds are ways to take use of true cloud resources in an enterprise fashion

**While Private VM farms are valuable tools,
they don't offer full advantage of a true *CLOUD***

Security & Performance

=

Compliance & SLA's

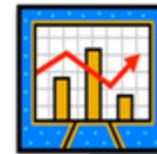

Security

- Must be more secure than in-house
- Compliance
 - SaaS 70
 - PCI
 - European Safe Harbor

Performance

- Performance must be closer to traditional enterprise systems

SLA's

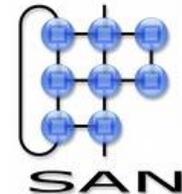

- Match the higher performance
- Comprehensive
- Verifiable

Simply put Cloud's need to more closely mimic traditional deployments to gain Enterprise adoption

Standards

=

**Software
& Hardware**

ORACLE

**Network Services, Storage Options, and Enterprise
Software Configurations Critical**

Single User
Systems

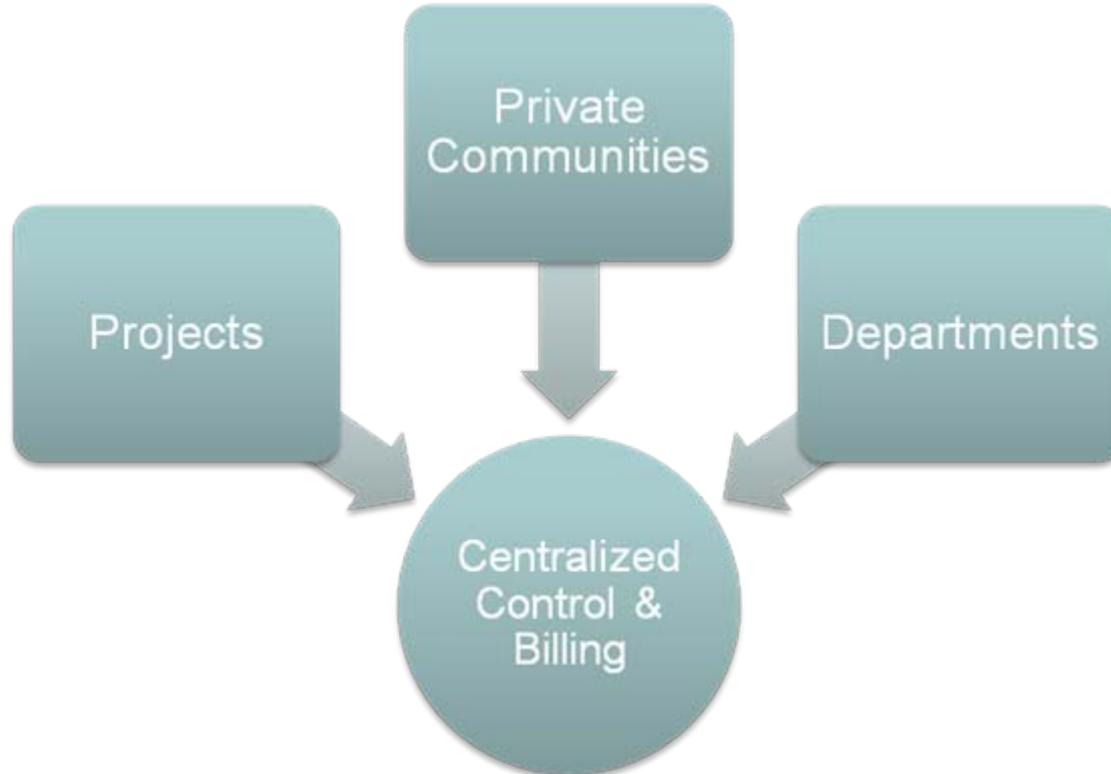

No
Enterprise
Control

**Multi-User
Systems**

=

**Management
& Control**

OpSource™ With Right Tools the Enterprise Storm will Clear

Compliance
& SLA's

Mgt. and
Control
