OpSource Delivers Web Application to Support Litigation Involving Electronic Evidence

LitSoft Chooses OpSource On-Demand for New LitScope Review Platform

SANTA CLARA, Calif. – **January 28, 2008** – OpSource™, the SaaS delivery experts, today announced that LitSoft Inc., a leading eDiscovery software and technology innovator, has chosen OpSource On-Demand™ to deliver LitScope, the electronic discovery industry's first Web 2.0 electronically stored information (ESI) review platform. LitScope will enable LitSoft's law firm and corporate clients to use any main-stream Web browser, running on any main-stream operating system, to access its documents from anywhere in the world where an Internet connection is available. LitScope includes many advanced features such as full Unicode support, search-based batching, a review management dashboard, and many others, all packaged in an extremely intuitive Web 2.0 interface and backed by 24/7 end user support via dedicated toll free phone.

"We chose OpSource after an intensive review process," said Steve Jreige, CEO, LitSoft. "Several companies met our most basic requirements, including a data center that was local to our northern Virginia office and provided Statement on Auditing Standards Number 70 (SAS 70) Type II compliance. But what really separated OpSource was some of the more specialized services it offers, especially 24/7 support for our end-users, which was very critical to us. And OpSource offered a breadth of technical expertise that far surpasses its managed hosting provider competitors."

Treb Ryan, CEO, OpSource, said, "LitSoft wisely designed LitScope as a software-as-a-service application. It enables LitSoft to easily and economically load client data and keep it live for as long as a case is active, charging LitSoft's clients by the month during that time. But when a case is resolved, it's just as easy for LitSoft to remove the data, making this a true on-demand delivery model. Utilizing OpSource, LitSoft can take advantage of our highly secure data center and operations steeped in best practices such as PCI DSS compliance. Our team has also designed specific procedures for LitScope, which enable us to get data online

within 24 hours after LitSoft delivers the hard drive to us. We do all this while maintaining the internal controls required by the rigorous SAS 70 Type II audit."

LitSoft plans to officially unveil LitScope to the public in February at the LegalTech New York conference – visit them at booth #3619 for a demo.

About OpSource On-Demand

A comprehensive, award-winning Web application delivery platform, OpSource On-Demand enables companies to quickly and securely offer applications on demand.
